ELI 1.3 Version Note

Backward-compatibility

ELI 1.3 is backward compatible with ELI 1.2. ELI 1.3 introduces new high-level classes for compatibility with ELI-DL (ELI for Draft Legislation) and introduces 4 new optional properties.

It is not required to change existing ELI metadata publication.

Semantic changes

- Introduced High-Level FRBR classes Work, Expression and Manifestation, to be shared in ELI-DL;
- Broaden the domain and range of structural FRBR properties to Work, Expression or Manifestation, so that they can be shared in ELI-DL :
    - eli:is_member_of/eli:has_member
    - eli:is_part_of/eli:has_part
    - eli:is_realized_in/eli:realizes
    - eli:is_embodied_by/eli:embodies
    - eli:exemplified_by
- broaden the domain of eli:title, eli:title_short, eli:title_alternative, eli:language to:eli:Expression so that they can be shared in ELI-DL;
- introduced eli:type_subdivision to express the type of a LegalResourceSubdivision
- introduced eli:countersigned_by to capture countersignatures of legislation
- introduced eli:ensures_implementation_of / eli:implementation_ensured_by to capture the fact that some legislation are modified to remain "compatible" with other EU-level or national-level regulations; this implies a legal meaning;

Editorial changes

- fixed the definition of the modified properties to match their new domain/range
- updated the links to MDR to the EU vocabularies website
- declared eli:Manifestation a subclass of frbroo:F3_Manifestation (instead of Manifestion_Product_Type) to follow new LRM conceptual model;
